

Assignment -2
Python Programming

Assignment Date	28-09-2022
Student Name	MOHAMMED SAAD A R
Student Roll Number	311019104049
Team ID	PNT2022TMID27251
Project Name	Customer Care Registry

1. Create a User table with Username, email, roll number, password
2. Perform UPDATE,DELETE Queries with user table
3. Connect python code to db2.
4. Create a flask app with registration page, login page and welcome page. By default load the registration page once the user enters all the fields, store the data in the database and navigate to the login page authenticate user username and password. If the user is valid show the welcome page

Solution:

App.py

```
from flask import Flask, render_template, request,
redirect import    sqlite3 as    sql

import models as dbHandler

app    =    Flask(_name_____)

app.secret_key = 'fasdgfdgdfg'

@app.route('/')

def home():

    return render_template('home.html')

@app.route('/adduser')
```

```
def new_user():  
    return render_template('add_user.html')  
  
@app.route('/addrec', methods = ['POST', 'GET'])  
def addrec():  
    if request.method == 'POST':  
        try:  
            email = request.form['email']  
            un = request.form['username']
```

```

    rn = request.form['rollnumber']

    pin = request.form['pin']

    with sql.connect("User_database.db") as con:

        cur = con.cursor()

        cur.execute("INSERT INTO users (email,username,rollnumber,pin)
VALUES (?, ?, ?, ?)", (email,un,rn,pin) )

        con.commit()

        msg = "Record successfully
added!" except:

        con.rollback()

        msg = "error in insert operation"

    finally:

        return render_template("list.html",msg = msg)

    con.close()

@app.route('/list')

def list():

    con      =      sql.connect("User_database.db")

    con.row_factory = sql.Row

    cur      =

    con.cursor() cur.execute("select *
from users") users = cur.fetchall()

    return render_template("list.html", users = users)

if name == ' main ':

    app.run(debug = True)

@app.route("/delete")

def delete():

    return render_template("delete.html")

@app.route('/deleterecord',methods = ["POST"])

def deleterecord():

```

```
un = request.form['username']
with sql.connect("User_database.db") as con:
    try:
        cur = con.cursor()
        cur.execute("DELETE FROM users WHERE username = ?",[un])
        con.commit()
        msg = "Record successfully deleted"
    except:
        msg = "can't be deleted"
    finally:
        return render_template("home1.html",msg = msg)
```

```

if name == ' main ':

    app.run(debug = True)

@app.route('/delldb',      methods      =
["POST"]) def delldb():

    con                                =

    sql.connect('User_database.db')    cur
    =  con.cursor()  cur.execute('DELETE
FROM users;') con.commit()
    con.close()

    msg = 'All the data has been deleted'

    return render_template("home1.html",msg = msg)

@app.route("/log")
def log():

    return render_template("login.html")

@app.route('/login', methods =['GET', 'POST'])
def login():

    un = request.form['username']

    if request.method=='POST':

        users  =

        dbHandler.retrieveUsers() msg =

        'Logged in successfully!'

        return render_template('welcome.html', users=un,
msg=msg) else:

        msg = 'You are not registered, would you like to be registered'
        return render_template('home1.html', msg=msg)

if __name__ ==      ' __main__ '

    ': app.run(debug=False,

    host='0.0.0.0')

```

Models.py

```
import sqlite3 as sql
```

```
def retrieveUsers():  
    con =  
    sql.connect("User_database.db") cur =  
    con.cursor()  
    cur.execute("SELECT username, pin FROM users")  
    users = cur.fetchone()  
    con.close()  
    return users
```

sqlite_db_setup.py

import sqlite3

```
conn = sqlite3.connect('User_database.db')  
print("Opened database successfully")  
conn.execute('CREATE TABLE users (email TEXT, username TEXT, rollnumber  
INTEGER, pin INTEGER)')  
print("Table created successfully")  
conn.close()
```

Home.html

<h1>Welcome to User DB APP</h1>

```
<a href="/">HOME</a><br><br>  
<a href="/adduser">User Registration</a><br><br>  
<a href="/list">List User</a><br><br> <a
